Nos. 7 and 9 = GRS-type "Mariposa"

Appendix to report No. GRS2022-098165

These vividly saturated 7 emeralds (Nos. 3, 4, 5, 6, 7, 9 and 10) are reminiscent in hue of the varieties displaying the legendary colors found in the world renowned Muzo mines. They are formally described as “Muzo Green” (*) and commonly known in the trade as “Old Mine” emeralds.

This particular 2 emerald (No. 7 and 9) displays an additional microscopic velvety appearance caused by a rare growth phenomenon described in the literature as "butterfly-wing effect".

These stones are given the designation GRS-type "Mariposa", referring to the Spanish word for butterfly.

This appendix indicates the specific quality and color for emeralds from various Colombian mines; however, it does not specify from which particular mine they were found.
